Financial accounting is the branch of accounting thought and practice concerned with preparing and providing information for external users of financial statements. This textbook helps students to understand the concepts that underpin the application of accounting theory to solve accounting problems. This international edition includes extracts from financial statements, definitions of key terms and exam examples. Unlike other textbooks, the author provides analysis of why accountants do what they do, and not just how. With such a wealth of accounting models and diagrams intertwined with this analysis, this book guides the reader through all the practicalities and concepts of financial accounting. Additional online questions, exercises and problems provide an opportunity to put this new-found knowledge into
practice along the way. This book is an essential guide for students new to accountancy, and an equally useful tool for more experienced students and researchers.

Essay from the year 2011 in the subject Business economics – Accounting and Taxes, grade: 64, University of Westminster (Westminster Business School), course: Financial Accounting and Policy, language: English, abstract: Since the financial crisis in 2008 the topic regulation of the markets at all revived. The world was looking for guilty parties in Rating agencies, financial institutions, governments and lastly audit firms and institutions which gave them their working framework – the accounting standards. On the one hand the scream for more regulation in the private sector to protect the public good became louder and on the other hand scientists were warning of such overbearing steps because they would be damaging
the economy. This issue provides the basis for this paper where accounting is seen as an economic good. Accounting information is not costless to produce for the corporations and it raises compliance costs. On the one hand managers are using accounting rules that minimize information costs and on the other hand shareholders want accounting rules that improve their ability to control and monitor the manager’s action. Theoretically, financial accounting and reporting should be objective, neutral and apolitical. However, the standard setting process can be influenced by external groups with different interests.
